

# **BOROUGH OF SPRING LAKE SHADE TREE COMMISSION**

## **WATERING**

As a homeowner, it is your responsibility to water your new tree. This is vital to its health, especially during the first fall and summer it is planted.

Trees can be watered by hand, by hose or by the installation of water bags that release water in a controlled manner. New trees need a thorough soaking to survive and grow.

The root ball of the tree may be wrapped in burlap and secured by biodegradable sisal cord. Do not cut or remove cord. It will decompose with no harm to the tree.

Please note, if a tree planted by the Borough fails due to lack of water, the Borough will decline any further request by you for any additional trees.
